

Настройка PPPoE-соединения на роутерах D-Link DIR-100/DIR-300

1. Зайти в браузер (Internet Explorer, Mozilla, Opera, или любой другой, использующийся на вашем компьютере) и в строке адреса набрать **192.168.0.1**.

В открывшемся окне в поле «**User Name**» вводим **admin**, поле «**Password**» оставляем пустым и нажимаем кнопку «**Log In**».

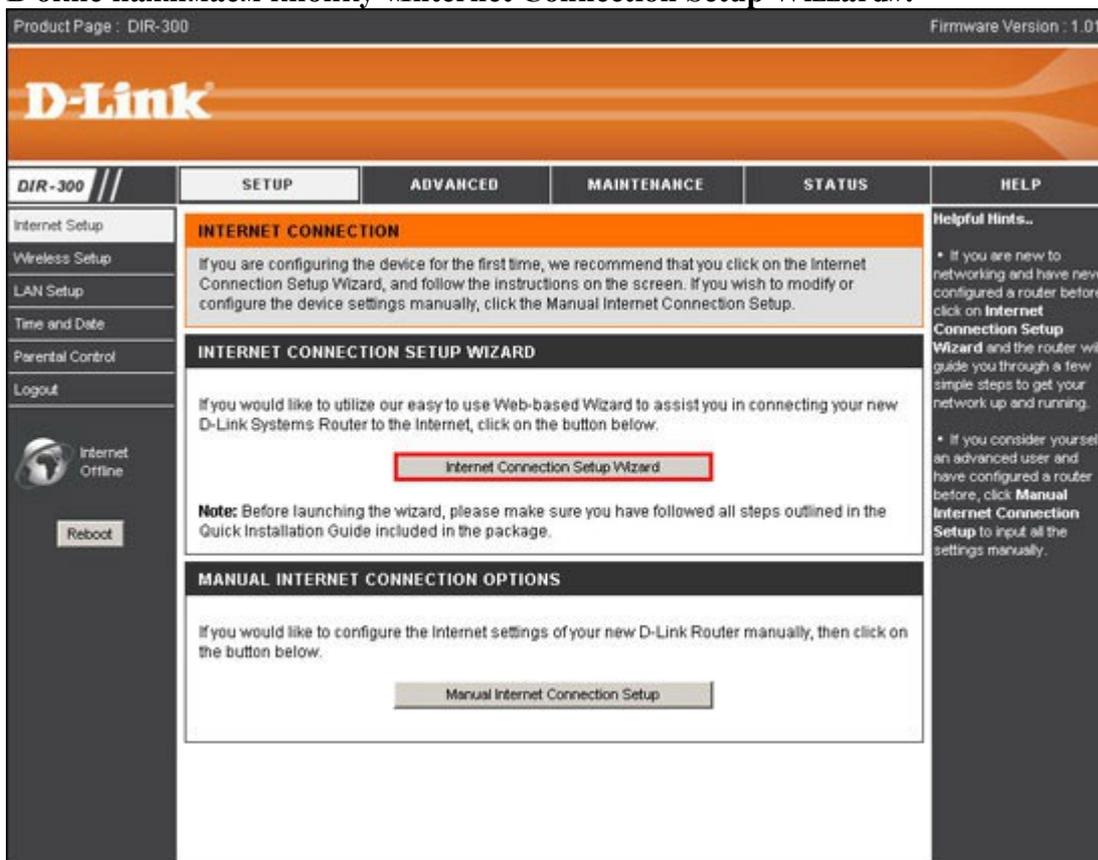

2. Теперь нам нужно установить пароль на роутер. Для этого:

В верхнем меню выбираем «SETUP».

В меню слева выбираем «Internet Setup».

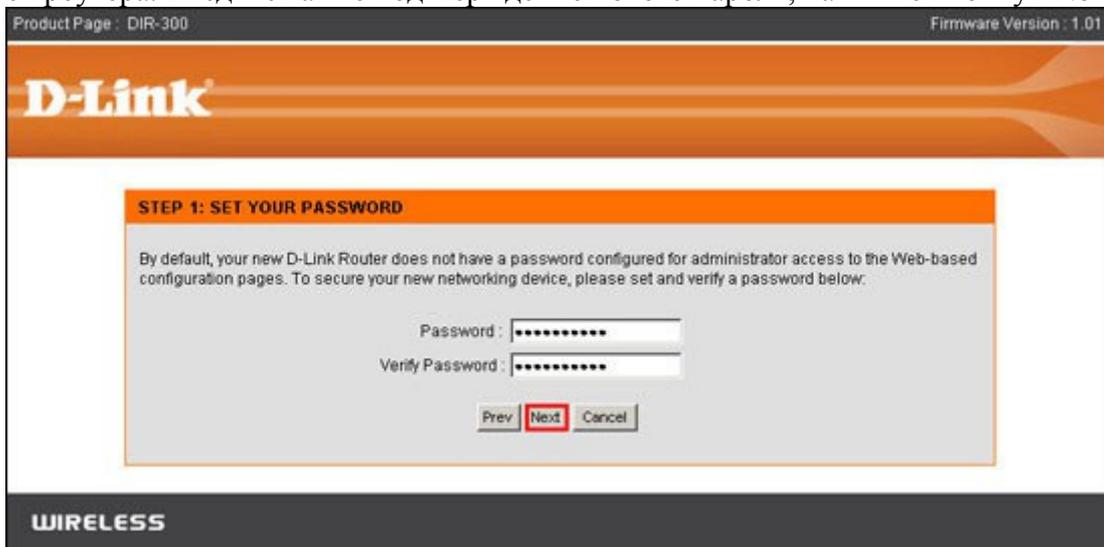

В окне нажимаем кнопку «Internet Connection Setup Wizzard».

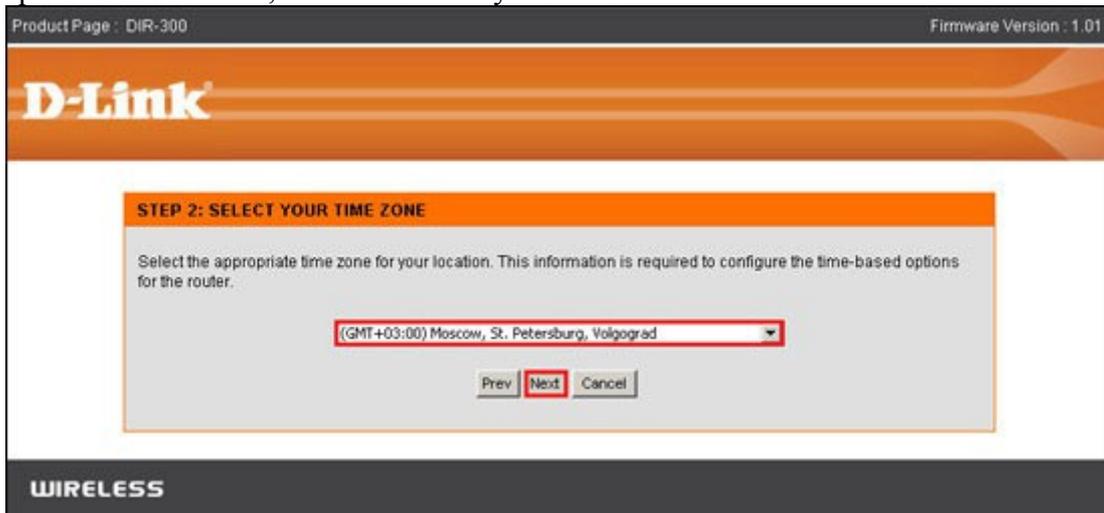

3. В появившемся окне нажимаем кнопку «**Next**».

4. Придумайте и введите новый пароль, который вы будете вводить в будущем для изменения настроек роутера. Введите также подтверждение нового пароля, нажмите кнопку «Next».

5. Выберите часовой пояс, нажмите кнопку «Next».

6. Выберите пункт «Username/Password (PPPoE)», нажмите кнопку «Next».

D-Link**STEP 3: CONFIGURE YOUR INTERNET CONNECTION** **DHCP Connection (Dynamic IP Address)**

Choose this if your Internet connection automatically provides you with an IP Address. Most Cable Modems use this type of connection.

 Username / Password Connection (PPPoE)

Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.

 Username / Password Connection (PPTP)

Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.

 Username / Password Connection (L2TP)

Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.

 Username / Password Connection (Bigpond)

Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.

 Static IP Address Connection

Choose this option if your Internet Setup Provider provided you with IP Address information that has to be manually configured.

 Russia PPTP (Dual Access)

Choose this option if your Internet connection requires a username and password to get online as well as static route to access Internet service provider's internal network. Certain ISPs in Russia use this type of connection.

 Russia PPPoE (Dual Access)

Choose this option if your Internet connection requires a username and password to get online as well as static route to access Internet service provider's internal network. Certain ISPs in Russia use this type of connection.

You can use the Wireless Connection Setup wizard or you can manually configure the connection.</p> <p>Please note that changes made on this section will also need to be duplicated to your wireless clients and PC.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p style="text-align: center; margin: 0;">WIRELESS CONNECTION SETUP WIZARD</p> <p>If you would like to utilize our easy to use Web-based Wizard to assist you in connecting your new D-Link Systems Wireless Router to the Internet, click on the button below.</p> <p style="text-align: center;"><input type="button" value="Wireless Connection Setup Wizard"/></p> <p>Note: Before launching the wizard, please make sure you have followed all steps outlined in the Quick Installation Guide included in the package.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p style="text-align: center; margin: 0;">MANUAL WIRELESS CONNECTION OPTIONS</p> <p>If you would like to configure the Internet settings of your new D-Link Router manually, then click on the button below.</p> <p style="text-align: center;"><input style="border: 1px solid red;" type="button" value="Manual Wireless Connection Setup"/></p> </div>				<p>Helpful Hints..</p> <ul style="list-style-type: none"> • If you are new to wireless networking and have never configured a wireless router before, click on Wireless Connection Setup Wizard and the router will guide you through a few simple steps to get your wireless network up and running. • If you consider yourself an advanced user and have configured a wireless router before, click Manual Wireless Connection Setup to input all the settings manually.

10. «Security Mode» выберите «Enable WPA/WPA2 Wireless Security (enhanced)».
 «WEP key» введите 10-ти значный ключ. Этот ключ беспроводное устройство будет запрашивать при подключении к беспроводной сети. Рекомендуем использовать серийный номер роутера (s/n, закреплен на нижней стороне роутера) — даже если вы забудете ключ беспроводной сети, то в любой момент сможете его восстановить.

Make sure the wireless card supports such feature or uses a certified Windows Vista driver in order to take advantage of this feature. • Changing your Wireless Network Name is the first step in securing your wireless network. We recommend that you change it to a familiar name that does not contain any personal information. • Enabling Hidden Mode is another way to secure your network. With this option enabled, no wireless clients will be able to see your wireless network when they perform scan to see what's available. In order for your wireless devices to connect to your router, you will need to manually enter the Wireless Network Name on each device. • If you have enabled Wireless Security, make sure you write down WEP Key or Passphrase that you have configured. You will need to enter this information on any wireless device that you connect to your wireless network.
